

Primed Plus Doors

Maintenance

- Doors are 'Primed Plus' finish and are not intended to be sold as a fully finished product.
- It is recommended that a final top coat should be applied after installation although some may view the 'Primed Plus' finish as acceptable in its current state. (Personal discretion applicable)
- It is recommended that a solvent based paint should be used when applying final top coat.
- Internationally recognised RAL code for each Colour is as follows:- Black = 9005, White = 9003 and Grey = 7044.
- Gloss level to match paint applied. Black = 10-15%. White/Grey 15-20%.
- If the door needs to be sized and the paint is totally removed from the edge of the door after trimming then a water based paint can be applied to re finish the edge.
